OBJECTIVE

- A passionate Full Stack PHP Developer with hands-on experience in building scalable web applications using PHP, Laravel, and MySQL. I aim to contribute effectively to an organization by delivering high-quality solutions while continuously enhancing my technical skills through real-world challenges.
- A quick learner with strong problem-solving abilities, adaptable to new technologies, and capable of working efficiently in team environments.

WORK EXPERIENCE

Jr. Laravel Developer - Kriyan Infotech Aug 2025 – March 2026

- Working as a Laravel Backend Developer, focusing on API development and scalable system architecture.
- Develop and maintain REST APIs for web and mobile applications using Laravel
- Design and optimize database structures for better performance and scalability
- Collaborate with frontend developers to ensure seamless integration
- Implement business logic and improve system efficiency

Full Stack PHP Developer Intern - Ncode Technologies Inc. Jan 2025 - July 2025

- Worked as a Full Stack Developer, contributing to both frontend and backend development.
- Developed a Hospital Management System using PHP, MySQL, and JavaScript
- Built modules for patient management, appointment scheduling, and admin panel
- Improved UI responsiveness and optimized application performance

TECHNOLOGY

Frontend	HTML, CSS, JavaScript, jQuery
Backend	PHP, Laravel
Database	MySQL
Web Services	REST APIs
Architecture	MVC

EDUCATION

2021 - 2025	Bachelor of Engineering (Information Technology) at Madhuben & Bhanubhai Patel Institute of Technology	CGPA: 6.73/10.0
2020 - 2021	12th Science at A Success High School, Jetpur	81.07%
2018 – 2019	Class 10th GSEB at Lion's High School, Jetpur	82%

SKILLS

Soft Skills	Problem Solving, Team Collaboration, Critical Thinking.
Languages	English, Hindi, Gujarati
Hobbies	Video/Photo Editing, Badminton, cricket, information about new technology, Music.

PROJECTS

Hospital Management System (MadiBook)

A web-based hospital management system designed to manage patient records, appointments, and billing operations efficiently.

- Worked as a Full Stack Developer handling both frontend and backend using PHP, MySQL, and JavaScript
- Implemented modules for patient management, appointment scheduling, and admin panel
- Ensured smooth performance and optimized system functionality

Product Inventory System

An inventory management system developed to track product stock and maintain records efficiently.

- Worked as a Backend Developer focusing on database design and CRUD operations.
- Optimized queries for efficient data handling and improved performance.
- Designed a simple structure for easy management.

Chatbot System

A chatbot application built to automate user queries and improve user interaction.

- Worked on development and integration, connecting backend logic with frontend UI.
- Designed response handling system for better engagement.
- Improved efficiency by reducing manual query handling.

AIIMS Raipur

A real-world healthcare project focused on managing hospital-related operations.

- Worked as a Backend Developer developing REST APIs and handling database operations.
- Ensured smooth integration between frontend and backend.
- Maintained performance and reliability for real-time usage.

Flashmarket.in

An e-commerce platform developed for online product management and transactions.

- Worked as a Laravel Backend Developer implementing APIs and business logic.
- Managed database operations and optimized queries.
- Collaborated with team members for smooth system integration.

Lexcru

A multi-role water purifier service management system for technicians, dealers, and sub-dealers with admin panel and mobile application.

- Worked as a Backend Developer building APIs and managing database operations.
- Handled backend integration for both admin panel and mobile application.
- Ensured smooth workflow, role-based access, and reliable data management.

Skedulin

A scheduling and appointment management platform with admin panel and user application.

- Worked as a Backend Developer responsible for API development and backend logic.
- Managed database operations and ensured seamless system functionality.
- Improved performance and handled real-time scheduling data.
